Wasp
BARCODE TECHNOLOGIES

AssetCloud
+ RFID

RFID Asset Tracking Software for Rapid Audits

Easily and quickly perform bulk asset transactions such as moves, check-outs, check-ins and disposals

Wasp's **AssetCloud Complete + RFID** solution enables bidirectional wireless communications between applications and everyday items. Pair your AssetCloud RFID annual subscription with a compatible RFID reader and passive RFID asset tags for a complete solution.

Our RFID solution offers subscribers an enhanced tracking experience with the tools necessary to meet all of your needs and applications.

WASP DR5
WASP RFID GUN GRIP

Slide our **Wasp DR5 2D Android Mobile Computer** into the **Wasp DR5 RFID Gun Grip** for a handheld, easy-to-use RFID scanner that has the ability to read standard barcodes as well as UHF and RFID codes!

Key Benefits

Scan Multiple Assets Simultaneously without Line-of-Sight

Stop wasting time walking around physically locating each asset to scan individual barcodes. Instead, use your RFID reader to scan the area where your assets are located and the device will pick up asset tags within range in seconds. **This could save you hours, or potentially days of manual labor.**

Improve Audit Accuracy and Speed

Due to the RFID reader's ability to scan assets within range, you will never overlook an asset again. **Quickly and easily locate lost or misplaced assets** with a quick scan of a room or office. Your audit accuracy and speed will greatly improve as a result.

Improve Asset Visibility

With traditional barcode scanning, you would have to point a barcode scanner directly at the tag in order to get an accurate scan. That would often require crawling under desks or climbing ladders to scan hard-to-reach assets. With RFID, the reader can be several feet away and still get an accurate scan. **You could easily scan several dozen assets in a room in just a few seconds.**
